

Virgin Atlantic Hangar, Heathrow

THE TASK

Virgin Atlantic Airways' new hangar at Heathrow has been designed to accommodate the airline's new fleet of Airbus A340-600s. The length and wingspan of the aircraft is larger than any of the other aircraft previously maintained at Heathrow.

TPS's team of specialist engineers provided an integrated civil, structural, mechanical and electrical engineering design solution working alongside their partner Meinhardt. One of the main objectives of the design was to ensure best practice was adopted from previous experienced of similar facilities worldwide.
