VACANCY

Principal Heavy Civils Engineer

Description

TPS Civil Engineering is a broad based group of civil engineers providing a wide range of civil engineering related design work in areas such as infrastructure, roads, transportation, land surveying, aviation and defence for its parent company Carillion and a large number of other private and public sector clients. Current work includes the City Airports apron extension and T5 satellite. There is future work in Dubai with Carillion and Rwanda Airport. Due to increased demand particularly from overseas we need to recruit a person to carry out the following responsibilities and tasks

Key Responsibilities

- Managing teams of civil engineers, including their recruitment, development and performance assessment
- Managing work loads between different teams
- Direct liaison with clients, assisting them with the development of project briefs
- Providing a responsive, customer focused design service to external and internal clients including preparation of briefs, scope of works etc, completion of technical tasks as appropriate to complete the works,
- Leading teams of engineers and technical staff to deliver civil engineering schemes.
- Oversight and review of designs for projects according to relevant Standards/ Codes
- Management of major projects to programme and budget,
- Project development liaison with clients, stakeholders, other professional bodies and contractors to TPS Consult's Quality Assurance procedures.
- Working with the rest of the Civils team to advance our technical capability to the highest standard. This will include identifying innovative approaches and techniques and presenting technical papers.
